

PAVEL PETRASYUK

SOFTWARE ENGINEER

PROFILE

Software engineer with a passion for front-end and a strong focus on intuitive UI and UX. Specialized in JavaScript (ES6+), React, Redux, TypeScript, RESTful architecture, Node/Express, Python.

email: ppavel0822@gmail.com // linkedin: devpavel // portfolio: pashatay.herokuapp.com

EDUCATION

Introduction to
Computer Science
Harvard University
2019

Bachelor of
Economics
MUH, Moscow
2011 - 2015

SKILLS

//Front-end

JavaScript,
TypeScript,
React.js (Router,
Context, Hooks),
Redux, Enzyme,
HTML5, CSS3,
Bootstrap, jQuery,
Webpack, Babel,
Gulp.js, Chart.js

//Back-end

Node.js, Express.js
PostgreSQL, PLSQL
MongoDB, Mongoose,
RESTful Architecture,
Mocha & Chai, JWT,
Python

//Dev-tools

Git, Github, Heroku,
Chrome Dev Tools,
Travis CI

INTERESTS

Songwriting
Cooking
Reading(Fyodor
Dostoyevsky)
Hiking

EXPERIENCE

PROJECTS

Dream.log *Software engineer | New York | 2020*

[demo](#) | [client-side repo](#) | [server-side repo](#)

Full-stack web application. Dream journal/blog.

- Designed App Architecture & Constructed a PostgreSQL database to handle relationship between users and data, aiding logical organization of records while enforcing ACID compliance ensuring stability and predictability of data
- Built Node.js server integrating Express RESTful architecture by designing semantic routes and middleware to modularize the request-response allowing for easy configuration of additional features
- Stored bcrypt-encrypted user passwords in a database by randomizing salt rounds in order to ensure data consistency
- Built client-site web API by leveraging reusable components in React.js to dynamically render pages with varying user data
- Developed UX/UI by making it fully responsive for mobile devices using media queries in vanilla CSS
- Exploited Chart.js library to visualize users data as a part of the app functionality

Bestie *Software engineer | New York | 2019*

[demo](#) | [client-side repo](#) | [server-side repo](#)

Full-stack web application. A birthday reminder.

- Engineered a Node/Express server by creating custom middleware to handle authentication, session management, and serving static assets, decoupling server logic and maintaining a modularized and clean database
- Utilized Nodemailer, Handlebars and Cron to implement email notifications functionality
- Implemented JWTs by generating bearer tokens and validating a user session by caching the required credentials in order to optimize the number of requests made to the database, resulting in faster server response time and improved scalability
- Implemented unit testing using Mocha/Chai and SuperTest module

WORK EXPERIENCE

Front-end Web Developer *Litanin.com | New York | 2019 - Present*

- Built reusable React Modules to supplement new features of the project
- Optimized design of web pages for smartphones and tablets to improve responsiveness and user experience by using CSS3
- Used JavaScript to design the logic of web applications
- Collaborated with other team members and participated in code reviews

Software Project Manager *Credit Europe Bank | Moscow | 2011 - 2015*

- Managed internal software projects
- Created project schedules and supervised a group of five engineers
- Created documentation and maintained project plan throughout project execution
- Acted as a liaison between the IT department and senior management
